SUMMARY

Full Stack Software Engineer with 5+ years building enterprise-scale React and Node.js (Express, NestJS) applications on AWS across identity/provisioning (SailPoint) and subscription billing (Chargebee). Specializes in event-driven microservices, high-volume REST APIs and secure authentication/authorization workflows, with recent experience building AI features (OpenAI, RAG, pgvector). Owns features end to end from design through AWS deployment and production support, delivering measurable gains in throughput, latency and deployment speed.

SKILLS

Languages: JavaScript, TypeScript, Python, Golang

Frontend: React, Next.js, HTML5, CSS3, Tailwind CSS

Backend & Architecture: Node.js, Express.js, NestJS, NPM, REST APIs, JSON, Microservices, Event-Driven Architecture, Distributed Systems, Webhooks, JWT Authentication

Databases & Caching: MongoDB (NoSQL), PostgreSQL, pgvector, Redis (in-memory data store / cache)

Messaging & Integration: Apache Kafka, RabbitMQ, AWS SQS, Asynchronous Processing, Integration Patterns

Cloud & Infrastructure: AWS (Lambda, API Gateway, ECS, S3, SQS, EC2, IAM, CloudFormation), Terraform, Docker, Kubernetes

DevOps & Observability: GitHub Actions, CI/CD, AWS CloudWatch, Load Testing, Performance Profiling

Testing: Jest, Playwright, Cypress, Unit / Integration / End-to-End Testing

Generative AI: OpenAI API, RAG, Vector Search (pgvector), Prompt Engineering, LLM Integration, GitHub Copilot, Claude Code

Methodologies: Agile Scrum, SDLC, Code Reviews

PROFESSIONAL EXPERIENCE

Full Stack Engineer

Apr 2024 – Present

SailPoint

- Design and deliver customer-facing features with React, Next.js and TypeScript on Node.js (Express, NestJS) services running on AWS (ECS, API Gateway, Lambda), partnering with product and cross-functional teams in Agile sprints.
- Built reusable React components and integrated backend APIs into customer-facing workflows, handling form validation, application state and loading/error feedback to improve usability and maintainability
- Architect and own distributed Node.js microservices and REST APIs for authentication, provisioning and authorization workflows, define service boundaries, data flow, async patterns and API contracts.
- Implemented event-driven provisioning with Kafka, AWS SQS and Lambda, adding idempotency, retries and structured error handling to increase processing throughput by 42%
- Optimized MongoDB queries, connection pooling and Redis caching, reducing API response latency by 39%.
- Built secure REST integrations with enterprise platforms under strict authentication and authorization controls, improving synchronization accuracy by 36%.
- Expanded Jest unit and integration tests and Cypress end-to-end tests across UI and API workflows, reducing production defects by 44%.
- Automated builds and deployments with GitHub Actions and Docker for Node.js services on AWS ECS, provisioned AWS infrastructure with Terraform, and reduced deployment time by 52%
- Troubleshoot production issues using AWS CloudWatch, resolved provisioning failures and performance bottlenecks, and reviewed code for security, maintainability and observability

- Built AI-powered semantic search and contextual recommendations for administrative workflows using OpenAI APIs and a RAG pipeline, with embeddings stored in PostgreSQL using pgvector, reducing manual effort by 48%.
- Use GitHub Copilot and Claude Code to accelerate delivery while maintaining code quality, security and production-readiness standards.

Full Stack Software Engineer

Mar 2020 – Dec 2022

Chargebee

- Built Node.js/Express microservices and REST APIs for subscription billing, invoicing and payment reconciliation, supporting 10M+ monthly billing cycles at 99.9% uptime.
- Integrated Stripe, PayPal and 15+ regional payment gateways; built webhook consumers for charges, refunds and chargebacks, keeping billing records in sync at 99.97% accuracy.
- Implemented RabbitMQ job queues and Node.js workers for scheduled billing, reducing invoice generation time by 41%.
- Developed React and Next.js self-service portal and financial dashboards (PostgreSQL) for subscription management and revenue tracking, reducing billing-related support tickets by 31%.
- Reduced payment processing latency by 37% and infrastructure costs by 28% through connection pooling, caching, schema optimization and indexing.
- Implemented PCI-DSS controls, GDPR data handling, audit logging and encryption across billing services, supporting SOC 2 compliance.

EDUCATION

Master of Science, Computer Science – University of Missouri Kansas City

CERTIFICATIONS

Oracle Cloud Infrastructure 2025 Generative AI Professional
