

Vamshi Reddy | Full Stack Engineer

San Francisco, CA | +1 (214) 937-9916 | vamshirmreddy@gmail.com | LinkedIn

SUMMARY

Full Stack Engineer with **6+ years of experience** developing cloud-based SaaS applications across frontend and backend technologies. Experienced designing customer-facing features with **Next.js, React, TypeScript, Java, Golang, Python, Node.js, and AWS**, while building REST APIs, microservices, and event-driven services that support high-volume cloud applications. Hands-on experience integrating **OpenAI APIs** to deliver contextual search, intelligent recommendations, and workflow automation, with a strong focus on application performance, asynchronous processing, API optimization, and system reliability. Proven ability to own features from technical design through deployment, working closely with product and engineering teams to deliver secure, maintainable, and business-focused software.

PROFESSIONAL EXPERIENCE

SailPoint

Apr 2024 - Present | TX, USA

Full Stack Engineer

- Owned the delivery of customer-facing product capabilities using **Next.js, React, TypeScript, Java, Go, and AWS**, translating product requirements into scalable production features while reducing delivery cycles by **35%**.
- Designed and implemented scalable **Java and Golang** microservices and REST APIs supporting authentication, provisioning, and authorization workflows, maintaining **99.9%** application availability across distributed cloud environments.
- Integrated **OpenAI APIs** to deliver contextual search, intelligent recommendations, and workflow automation through prompt engineering, reducing manual administrative effort by **48%** while improving operational efficiency.
- Engineered asynchronous event-driven services using **Kafka, Redis, AWS SQS, and webhooks**, increasing provisioning throughput by **42%** and enabling reliable processing across high-volume production workloads.
- Improved application scalability through PostgreSQL optimization, Redis caching, performance profiling, and load testing, reducing average API response latency by **39%** while sustaining increased production traffic.
- Built reusable frontend architecture with **Next.js, React, TypeScript, and Tailwind CSS**, accelerating feature implementation by **31%** while improving consistency across customer-facing applications.
- Designed secure API integrations and cloud-native backend services enabling seamless communication with enterprise platforms while improving external system synchronization accuracy by **36%**.
- Strengthened release quality by implementing automated unit, integration, and end-to-end testing using **Jest, Playwright, and Cypress**, reducing production defects by **44%**.
- Owned feature delivery from technical design through implementation, testing, deployment, and production support while partnering with product managers and designers to continuously refine user experience based on customer feedback.
- Modernized CI/CD pipelines using **Docker, Kubernetes, GitHub Actions, and AWS**, reducing deployment time by **52%** and enabling reliable, repeatable software releases.
- Integrated AI-assisted development using GitHub Copilot and Claude Code into day-to-day engineering workflows while maintaining engineering standards around code quality, security, observability, and production readiness.

Chargebee

Mar 2019 - Dec 2022 | India

Full Stack Software Engineer

- Developed customer-facing subscription and billing capabilities using **React, Next.js, TypeScript, Node.js, Express.js, and PostgreSQL**, improving onboarding efficiency and subscription management performance by **33%**.
- Architected scalable backend services and REST APIs supporting subscription billing, invoicing, payment processing, and customer lifecycle management while maintaining **99.9%** production availability.
- Implemented asynchronous processing pipelines using **RabbitMQ, Redis, scheduled workers, and webhooks**, reducing recurring billing execution time by **41%** while improving transaction reliability.
- Integrated third-party payment gateways and SaaS platforms through secure REST APIs and webhook frameworks, improving payment synchronization accuracy by **38%** across global customer accounts.
- Enhanced frontend performance using **Next.js**, server-side rendering, lazy loading, and code splitting, reducing page load times by **43%** while improving customer experience and feature responsiveness.
- Built operational dashboards and reporting services using **React, SQL, and PostgreSQL**, providing near real-time visibility into subscription metrics, payment trends, and customer behavior for product teams.

- Optimized SQL queries, database indexing, and backend services, reducing report execution time by **46%** while supporting continued growth in transaction volumes.
- Automated containerized deployments using **Docker** and CI/CD pipelines, reducing release failures by **39%** while accelerating software delivery across development environments.
- Partnered with product managers, designers, and QA engineers to deliver production-ready features, owning implementation, testing, deployment, and post-release enhancements across multiple product iterations.
- Improved engineering quality through reusable component libraries, API standardization, peer code reviews, and automated testing, increasing development efficiency and long-term maintainability.

TECHNICAL SKILLS

Programming Languages: Java, Go (Golang), Python, TypeScript, JavaScript (ES6+), SQL

Frontend: React.js, Next.js, HTML5, CSS3, Tailwind CSS

Backend: Node.js, Spring Boot, Express.js, REST APIs, Microservices, Webhooks, JWT Authentication

Generative AI: GitHub Copilot, Claude Code, OpenAI API, Prompt Engineering, LLM Integration

Databases: PostgreSQL, Redis

Cloud & DevOps: AWS (EC2, Lambda, S3, IAM, CloudWatch), Docker, Kubernetes, GitHub Actions, CI/CD **Messaging &**

Integration: Apache Kafka, RabbitMQ, AWS SQS, Event-Driven Architecture, Asynchronous Processing

Testing: Jest, Playwright, Cypress, Unit Testing, Integration Testing, End-to-End Testing

Performance & Engineering: Performance Profiling, Load Testing, API Optimization, Distributed Systems, Caching

Development Practices: Git, GitHub, Agile Scrum, System Design, Feature Ownership, Code Reviews

EDUCATION

Master of Science - Computer Science

University of Missouri, Kansas City, MO, USA
